

POLY FOOTBATH

32" x 78" x 6" Poly Footbath 40 gallons (shipping weight 46 lbs.)

Note: Use of two footbaths is recommended by most veterinarians; the first for a water rinse and the second for disinfectant solution. The separate water rinse keeps disinfectant solution cleaner, longer.

Specifications:

No wood frame needed - Self Supporting.

Cross-rib, safety - grip bottom opens hooves wider.

Ready to use - no assembly required.

Quick and easy way to clean and disinfect cattle's feet.

Footbath Facts:

- Washing action of footbath removes damaging material from feet - helps prevent buildup of dirt and manure between cleats, where harmful bacteria tends to harbor.
- Disinfectant solution (copper sulfate mixed with water or other solution), kills or inhibits bacterial infections such as hairy-warts, foot-rot, and heel erosion - penetrates up between toes and cracks (where bacteria inflames the soft skin), as well as under the horn lining and inner surfaces of each cleat.
- Disinfectant solution hardens the horn and toughens the skin in vital areas between cleats of the hoof. The drying effect then makes cattle's feet more resistant to bacterial infection.
- High-density, black, all poly - won't rust, rot, puncture or crack, even at extreme temperatures.
- Thick-walled, seamless, one-piece unit is extra-strong and leak proof.
- Cross-rib bottom and double-wall sides add even more strength and rigidity-eliminates cost of wood support frame.
