

MicroDirect®

Direct Fed Microbials and Enzymes for Ruminant Performance

MicroDirect® represents the new generation of digestive direct fed microbials, providing a more efficient delivery system. It is designed for lactating and dry cows, to help improve performance and optimize health across a wide variety of diets, feeding situations, and environments. This multifunctional, microencapsulated bacteria and enzyme additive is formulated to aid in the digestion of certain fibers, proteins and specific starches found in soy and corn diets

- ✓ **Reduces corn and fiber passage in manure**
- ✓ **Maximizes economic value of feed ingredients**
- ✓ **Maximizes utilization of feed ingredients**
- ✓ **Increases nutrient availability**
- ✓ **Can improve milk components such as butterfat and milk protein**
- ✓ **Shows improved body condition and animal performance**
- ✓ **Helps sustain production through stress and feed changes**

Guaranteed Analysis

4.91 billion colony forming units per pound of lactic acid bacteria
7.98 trillion colony forming units per pound of live yeast

Ingredients

Ground Limestone, Rice Hulls, Dried Corn Distillers Grains, Saccharomyces Cerevisiae, Yucca Schidigera, Betaine, Dried Aspergillus Oryzae Fermentation Extract, Dried Aspergillus Niger Fermentation Extract, Yeast Culture, and Dried Fermentation Products of: Lactobacillus acidophilus, Bifidobacterium thermophilum, Bifidobacterium longum, Enterococcus faecium and Bacillus subtilis

Feeding Directions

Blend into dairy cow rations, premixes, mineral mix or top dress at the following rates:

Dry cows: ½ oz per head per day
Transition Cows: 1 ½ oz per head per day
Lactating Cows: 1-3 weeks - 1 ½ oz per day
 4-8 weeks - 1 oz per day
 8+ weeks - ¾ oz per day

Package Sizes

50 lb bag
