

There's an easier way to prevent pinkeye: 20/20 Vision® 7.

- Pinkeye-infected calves suffer from loss of appetite, lowered body condition, and blindness. Treatment consumes manpower and productivity, and infected calves gain less weight — all costing you money.
- When used in conjunction with fly control management, 20/20 Vision 7 can help prevent pinkeye outbreaks.
- 20/20 Vision 7 contains eight *Moraxella bovis* strains for the broadest protection available. No other pinkeye vaccine contains more.
- Vaccinating against clostridial diseases is the perfect time to help prevent pinkeye — 20/20 Vision 7 does both simultaneously.

Vision®

A spot in the eye means a hole in your pocket.
Look to 20/20 Vision 7.
